ABOUT ME

A Designer's Eye. A Machinist's Hands.

I bring a designer's eye for precision and detail to the world of CNC machining. Seven years of graphic design work trained me to read complexity at a glance—now I apply that same instinct to interpreting technical drawings, translating them into accurate G-code and clean machine setups.

I've completed **500 hours of hands-on training through the JARC Fast Track CNC program**, and I'm building **CAD/CAM skills through ongoing Fusion 360 self-study**. I bring curiosity, discipline, and a genuine drive to keep learning—qualities that let me own a project from blueprint to finished part, and to treat every setup as a chance to sharpen my craft.

Career Goal

Precision Today. Innovation Tomorrow

My vision is to bridge design and machining—turning precise ideas into precision parts. I want to keep growing with the latest tools and techniques, bringing a designer's eye for detail to everything I build, while cutting waste and raising the bar for quality.

My goal is to be someone a manufacturing team can count on for both craftsmanship and fresh thinking.

Safety&Equipment

Safety Isn't Optional. It's Operational.

I treat safety as the foundation of quality work, not an afterthought.

Every machine demands respect—proper setup, careful tool handling, and disciplined operation are non-negotiable, every time.

Following shop protocols isn't about restriction; it's what makes precision and consistency possible.

Equipment

Hass Milling Machine,
Calipers(Dial/Electronic),
Micrometers, Depth Gauges
Protractors

NIMS I

Material : Alluminum
Machine : Hass mills
Tolerance : +/- 0.003
Dimensions : 2.5" X 3.5" X 0.725"

Projects 04

FUSION 360

Parametric CAD & Assembly Practice

- **Left:** Mechanical Screw Clamp Assembly (Multi-body Modeling & Thread Pitch Design)
- **Right:** NIMS CNC Part Wireframe & Blueprint Modeling

Skills & Expertise

CNC Milling

Setup, operation, and programming of milling machines

Fusion 360

Toolpath generation and design-to-part workflow

G-Code Programming

Writing and editing G-code for precision output

Blueprint Reading

Interpreting GD&T and complex technical drawings

Precision Measurement

Calipers, micrometers, and gauges etc.

Certification & Credentials

NIMS CNC Level I Milling

OSHA 10 Hours General Industry Certification

NAIL TECHNICIAN Certification

BARBICIDE Certification

TIPS (Alcohol Server Training &
FOOD Handler Certification)

Core Strengths

ATTENTION TO DETAIL

Trained by design work to catch what others miss, I bring that same precision to every measurement and cut.

01

02

PROBLEM- SOLVING

When something goes wrong, I stay calm, trace the root cause, and find a practical fix that keeps the work moving

CONTINUOUS LEARNING

I approach every new tool, process, or challenge as a chance to grow—never standing still.

03

04

TEAMWORK & COMMUNICATION

Clear communication and real collaboration are how I show up—accountable not just for my work, but for the team's outcome.

RELIABILITY & DISCIPLINE

I follow through on what I commit to, holding myself to the standard and the deadline, no exceptions.

05

Experience & Training

Graphic Design:
7Years

Precision-focused work sharpening eye for detail, layout, and technical accuracy

1

JARC Fast Track :
500+ Hours

500 hours Hands-on CNC training – milling, turning, measurement, and machine setup

2

CNC Machinist :
NOW

G-code, blueprint reading, machine setup – ready to contribute from day one

3

Fusion 360 :
Ongoing Self-Study

CAD/CAM skill development – toolpath creation and design-to-part workflow

4
